BLUON PERFORMANCE AUDIT

To whom it may concern:

In 2013, we converted our entire Irvine Facility's R-22 air conditioning equipment to a lower Global Warming Potential (GWP) refrigerant, Bluon TdX.

We our mechanical service provider to do this change out and validate the results. This was a very seamless process and no retrofit was needed to our existing equipment. We were able to change out 16 roof top package units (73 tons of cooling) varying from 2.5 to 5 tons.

Additional benefits as follows:

- Lower Energy Bills
- Lower Cycle times
- Lower pressures for the existing A/C units
- Greater tonnage capacity
- Compressor running Amps decreased by 15-38%

We highly recommend Bluon TdX.

Very truly yours,

Lawrence R. Armstrong
